Introdução a Programação com Python [26E1_2]

Strings (str)

Escape "\"

```
loren = 'Contrary to popular belief, Lorem Ipsum is not simply random text. It has roots in a piece of classical Latin li
print(loren, type(loren))
```

Contrary to popular belief, Lorem Ipsum is not simply random text. It has roots in a piece of classical Latin literature from 45

```
loren = 'Contrary to popular belief,\nLorem Ipsum is not simply random text.\nIt has roots in a piece of classical Latin
print(loren, type(loren))
```

Contrary to popular belief,
Lorem Ipsum is not simply random text.
It has roots in a piece of classical Latin literature from 45 BC,
making it over 2000 years old. <class 'str'>

```
print('Lorem Ipsum: 123')
print('Lorem: 123')
print('Lorem Ipsum simply: 123')
```

Lorem Ipsum: 123
Lorem: 123
Lorem Ipsum simply: 123

```
print('Lorem Ipsum:\t123')
print('Lorem:\t123')
print('iiii:\t123')
print('Lorem Ipsum simply:\t123')
```

Lorem Ipsum: 123
Lorem: 123
iiii: 123
Lorem Ipsum simply: 123

```
print('Lorem Ipsum:\t123')
print('Lorem Ipsum:\t1233233')
```

Lorem Ipsum: 123
Lorem Ipsum: 1233233

```
text = 'aqui esta um texto explicativo sobre a "barra invertida" - \''  
print(text)
```

 Execution error

SyntaxError: unterminated string literal (detected at line 1) (990730115.py, line 1)

Show error details

```
text = 'aqui esta um texto explicativo sobre a "barra invertida" - \''  
print(text)
```

aqui esta um texto explicativo sobre a "barra invertida" - \

```
text = 'aqui esta um texto explicativo sobre a 'barra invertida' - \''  
print(text)
```

 Execution error

SyntaxError: invalid syntax (3168648582.py, line 1)

Show error details

```
text = 'aqui esta um texto explicativo sobre a \'barra invertida\' - \''  
print(text)
```

```
loren = 'sed do eiusmod tempor\nincididunt ut labore'  
print(loren)
```

sed do eiusmod tempor
incididunt ut labore

```
loren = 'sed do eiusmod tempor\\nincididunt ut labore'  
print(loren)
```

sed do eiusmod tempor\nincididunt ut labore

```
text = 'Lorem ipsum dolor sit amet,\nconsectetur adipiscing elit,\nsed do eiusmod tempor incididunt ut labore et dolore m'  
print(text)
```

Lorem ipsum dolor sit amet,
consectetur adipiscing elit,
sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

```
text = r'Lorem ipsum dolor sit amet,\nconsectetur adipiscing elit,\nsed do eiusmod tempor incididunt ut labore et dolore'  
print(text)
```

Lorem ipsum dolor sit amet,\nconsectetur adipiscing elit,\nsed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

Operações

+, *

+ : operador de concatenacao

```
nome = 'Python'
sobrenome = 'Programming'
```

#saida: Python Programming
#como?

```
print(nome, sobrenome)
```

```
nome_completo = nome + ' ' + sobrenome
print(nome_completo)
```

Python Programming
Python Programming

```
numero = 123
string = 'Aqui eh uma string'

concatenar_numero_string = numero + string
print(concatenar_numero_string)
```

 Execution error

TypeError: unsupported operand type(s) for +: 'int' and 'str'

Show error details

```
numero = 123
string = 'Aqui eh uma string'

concatenar_numero_string = str(numero) + string
print(concatenar_numero_string)
```
